

PROGRAM DESIGN METHODS (4 CREDITS)

Learning Outcomes:

On successful completion of this course, students will be able to: explain the requirements of writing a program or system; apply pseudo-code to solve problem; analyze the requirements of a system; solve system design problems using UML.

Topics:

1. Input; Process; Output (L);
2. Modules (L);
3. Decision Structure and Boolean Logic (L);
4. Repetition (L);
5. Function and Input Validation (L);
6. Files and menu driven programming (L);
7. GUI and event driven programming (L);
8. Analysis Modelling (L);
9. Business Process and Functional Modelling (L);
10. Structural Modelling (L);
11. Behavioral Modelling (L);
12. Design Model and Strategy (L);
13. Input;
14. Process;
15. Output (T);
16. Modules (T);
17. Decision Structure and Boolean Logic (T);
18. Repetition (T);
19. Function and Input Validation (T);
20. Files and menu driven programming (T);
21. GUI and event driven programming (T);
22. Analysis Modelling (T);
23. Business Process and Functional Modelling (T);
24. Structural Modelling (T);
25. Behavioral Modelling (T);
26. Design Model and Strategy (T);
27. Class and Method Design (L);
28. Class and Method Design (T);

About this course

Course ini mempelajari tentang Metode Perancangan Program bagian Object-Oriented.

What you will learn

Section 1

Topic 1: Object Oriented

Topic 2: Class Diagram

Topic 3: Class Relationship

Topic 4: Data Dictionary

Topic 5: Use Case Diagram

Topic 6: Use Case Description

Topic 7: CRC Card

Topic 8: Activity Diagram

Topic 9: State Diagram

Topic 10: Sequence Diagram

Topic 11: Collaboration Diagram

Topic 12: Implementation Diagram
